

Single Sign On (SSO)

End consumer of our services is the leading provider of post transportation in Austria. In the main types of these services can be included packaging services, transportation and securing of the post, realization of financial services, while the main division is comprised of letters, packages and logistics. Specialists of the stengl a.s. group have since the year 2011 participated on development of software online SSO system for administration of customer's data.

Customer

Adesso

Long-term partner of Stengl Company, the Adesso Austria GmbH (Adesso) firm provides technologically qualified services mainly in Microsoft NET technology field. The company Adesso functions in the field IT services providing as a supplier of software solution and optimizes key processes of its customers by enlisting most modern IT technologies combining technological competencies and professional domain know-how.

Starting Position / Goals

In the year 2011 we have extended our long term cooperation to implement as ASP.NET and .NET programming on the project for the end-user customer from the postal service's field.

Solution / Result / Contribution

Our company stengl a.s. participate on development and implementation of online system Single Sign On (SSO) using ASP.NET, AJAX, and WCF technologies. SSO is online system for administration of customers data and its goal is to create an element for customer, where every end-user client can administer his own data and services in the customer zone. It is enough, if the customer only once register centrally and following that he is able to use all to him available online services without inputting any particular additional customer's data. SSO is momentarily implemented with the following functionalities:

- Unified user data on the web portal (one user account for online services, e-shop, as also for the philatelist's club)
- Administration of personal data and data about addresses for delivering mail and data about residence
- Administration of contact data, administration of user name and password and administration of company's data
- Support with registration by helping filling texts, PAC addresses proposals

ABOUT STENGL a.s. COMPANY

Since the year 1999 we bring strategic solutions for business subjects, state organizations, self-governing regions and to the third sector. The broad knowledge of the private and public environment problems is enabling us to gain and to furthest provide market oriented specific experiences that provide our partners with added value and support their successful growth on the market. We have worked our way up to be one of the most important counselors for self-governing regions, department of transportation, environment, and state support for sport, energetic effectiveness, and others, on Slovak market. We are, historically speaking, one of the largest providers of IT services for clients coming of German speaking countries.
